

Climate Change Policy

We support science-based international and national actions to address the challenges presented by climate change, including economic incentives for researching, developing and deploying low carbon and renewable-energy technologies.

In addition to adding our voice to call for action, our company is taking it's own steps to proactively reduce energy and water demand, and greenhouse gas (GHG) emissions from our operations. We recognise that we have an important role to play in identifying and responding to the public health risks associated with climate change.

RISC vehicles to have low Co2 emission, all packaging to be reused when and where possible.

All lighting to be low energy where and when possible.

All personnel have duty and are encouraged to help reduce energy, water and greenhouse gases this can be achieved by switching lights, computers etc. off when not required, delivery routes planned to be both economic and practical thus helping to reduce our carbon footprint.

Signed on behalf of RISC, a trading name of Teccon Ltd
